Keynote

June 2017

DIVERGENT PRICES IN GLOBAL STAINLESS STEEL MARKETS

Stainless steel flat products ex-mill prices decreased again, this month, in most of the countries surveyed by MEPS. Further reductions are likely, in Western nations, in the near term. Market participants in Europe and North America predict that July/August is likely to represent the bottom of the current price curve.

Transaction values fell sharply, this month, in the United States, under the influence of reduced raw material costs. While nickel values have stabilised, somewhat, in recent weeks, the decrease in the European ferrochrome contract price for the third quarter will affect stainless steel selling figures in the coming months. The US mills' alloy surcharges for July,

represent a further, significant cut, month-on-month. Our tabled figure for grade 304, cold rolled coil, for June, is already over 5 percent lower than the recent peak value, recorded in April. However, it should be noted that this month's price is more than 20 percent higher than that published one year ago.

Alloy surcharges continue to slide, in Europe. The recent weakness in the LME nickel cost had a negative effect on the calculations for June and July. The reduced ferrochrome contract figure is likely to result in more cuts for August. Furthermore, basis prices began to weaken, this month, and market players foresee additional discounts, in the short term. MEPS' published transaction value for type 304, cold rolled

coil, in Germany, for June, is more than 9 percent below the recent high figure, from April, but remains nearly 20 percent higher than the price recorded in June 2016.

Chinese price formulations react much more quickly to day-to-day fluctuations in raw material values, than those used in most other nations. Consequently, selling figures, in China, have risen, slightly, in recent weeks, in response to upturns in spot prices for both nickel and ferrochrome. Nevertheless, our tabled numbers, for grade 304, cold rolled coil, in June, are more than 23 percent down on the peak figure, published in December 2016, but 2 percent higher than the price reported twelve months ago.

Flat Products

Hot Rolled Coil and Plate

Market participants, in the United States, believe that real demand is holding up but purchasing activity is slowing as the summer holiday season approaches. Furthermore, buyers are cautious while transaction values are on a downward path. Basis figures for hot rolled coil plummeted, this month, as producers attempted to fill their production capacity by slashing prices.

Japanese buyers are reluctant to place orders, due to the negative price trend in the region. Domestic mills sought rollover figures, for June, but market values for 300 series coils slipped by ¥5000 per tonne. Underlying demand is fair, in South Korea, but customers are delaying order placement while they assess the effects of Chinese price movements on the local market. Selling values for type 304 coils dropped by KRW200,000 per tonne, month-on-month, in June, but may soon follow the upturn in Chinese numbers.

Taiwan's stainless steel hot rolled coil import volume increased by more than 30 percent, in May, compared with the previous month's tonnage. Falling raw material costs pushed hot rolled coil and plate prices down, in June. Chinese selling figures continued to slide, in the weeks following our last report. However, the mills succeeded in implementing rises, in recent weeks, supported by depleted inventories in the supply chain and an upturn in spot ferrochrome values.

In Europe, the low commodity price for oil is depressing the number of plate-consuming projects. Demand from the construction sector is strong, in Germany. Metalworkers and fabricators are also busy. Nevertheless, material is plentiful in the European market. In France, all plate suppliers are competing for a limited number of orders. Purchasing activity is further subdued by falling prices, as buyers wait to see how far values will slide. Demand from the oil and gas segment is weak in Italy. However, activity is at a satisfactory level in other energy sectors, as well

as the chemical industries and the manufacture of food processing equipment. Sales to the construction sector will hold up through the summer, as this is the industry's busiest time.

Hot rolled plate sales, in the United Kingdom, picked up, a little, in June, but remain at a mediocre level. Buyers are reluctant to commit to deals when they are unsure about the short-term price trend. Market conditions are testing, in Spain. Distributors are nervous and want to sell material quickly – even though this may lead to them making no profit from the deals. Basis values for grade 304 hot rolled coil declined by €20 per tonne, this month. Similar material, from Asia, is offered at very competitive prices.

The Swedish economy remains strong but no individual industry exhibits booming sales. The summer shutdown period will slow business activity but, for now, some "last-minute" purchases are noted. Underlying demand is fair, in the Netherlands, but the holiday season will subdue purchasing. Selling values are coming under negative pressure, exacerbated by attractive import offers. Domestic consumption is reasonable, in Denmark. Stockists report satisfactory sales tonnages but they struggle to sell material at more than its purchase price, in a falling market.

Cold Rolled Coil

Alloy surcharges fell again, in the United States, this month. The decrease in the European ferrochrome contract price will ensure further cuts in July and, probably, August, in that region. Last month's cut in the discount to the mills' list basis prices was reversed, in June. Import tonnages from China, rendered uncompetitive by antidumping duties, have been

replaced, largely, by material from other Asian suppliers. Market participants now await the government's deliberation on Section 232 measures – which would limit imports on the grounds of national security.

Demand is quite stable, in Japan, but purchasing activity is subdued as buyers observe a downward price trend. Domestic producers announced rollover figures, for austenitic coils, for June, but market values decreased by ¥5000 per tonne. In South Korea, ex-mill grade 304 coil selling numbers fell by KRW200,000 per tonne between May and June. The market may soon start to mirror the recent upturn in Chinese prices – prompting a burst in purchasing activity as buyers anticipate further increases.

	Low	275	285	295	305	315	315	310
EU Average	High	2284	2455	2541	2514	2562	2455	2318
	Low	2217	2389	2475	2448	2496	2389	2252

Falling raw material costs continued to push stainless steel prices down, in Taiwan, in June. Cold rolled coil, 300 series values slipped by NT\$3500 per tonne, compared with the previous month. The recent negative price trend, in China, led to sparse inventories, throughout the supply chain. This, along with rising spot values for ferrochrome, enabled domestic suppliers to push through moderate hikes in austenitic coil prices, since early June.

Stainless steel processors are busy, in Germany. Demand from the automotive sector is good. However, purchasing activity is subdued, as many customers ordered ahead, during the first quarter, when prices were climbing. Basis values edged downward, in France, this month. Further discounted offers are available as some sellers anticipate reduced surcharges, in July. The negative price trend persists, in Italy. Service centres are compelled to sell some material at a loss, in order to replace it with cheaper stock. Imports remain attractive.

Distributors, in the United Kingdom, are selling satisfactory volumes to carmakers and other end-users. However, competition between stockists is driving prices down. Low-priced offers from Far East suppliers are reported. Market participants fear

that political uncertainty may negatively affect the economy. Demand is subdued, in Spain. Buyers are nervous, as low nickel and chromium costs continue to undermine stainless steel values. Mills conceded basis price cuts, reluctantly, this month. Asian material is offered at €1850 per tonne, CIF, for delivery in twelve weeks.

Swedish customers are working on a “hand-to-mouth” basis as they wait to see how low prices will go. Mills have tried to lift basis figures, with little success. Supply chain participants, in the Netherlands, are trying to minimise their inventories, ahead of the summer shutdown period. Basis prices are softening, as end-users demand reductions. Consumption is satisfactory, in Denmark, but customers are buying only for their immediate needs. Regional mills’ schedules are quite full but offers from southern Europe and Asia are abundant. Basis values started to fall, this month, and market participants foresee further cuts.

Purchasing activity, in the United States, typically slows in advance of the summer vacation period. That effect has been magnified, this year, by the negative price trend. Basis values were rolled over again, this month, but declining raw material costs continue to push alloy surcharges downward. Buyers, therefore, order no more than they need, anticipating further reductions. Stockists' inventories are lean, by historic standards, but many say that they will try to maintain these levels when the market picks up.

In South Korea, reduced raw material costs pushed grade 304 bar prices down by KRW300,000 per tonne, this month. Chinese market values, for the same product, rose by RMB500 per tonne, compared with last month, as producers took advantage of their customers' depleted stock levels and an upturn in spot ferrochrome prices.

In France, effective prices for austenitic bars decreased by less than the fall in alloy surcharges. One market player says that this brings nominal basis figures back to a "normal" level. Business is slow, in the United Kingdom. Stockists are reluctant to hold excessive inventory. Imports from Germany, Eastern Europe and India are available at very competitive prices.

End-user demand is fair, in Spain. Transaction values, for grade 304 bars, fell by only €50 per tonne, month-on-month, which is considerably less than the cut in the alloy surcharge. Asian type 304, bright bars, are offered at €1950 per tonne, CIF, for September delivery.

Medium Term Price Forecasts

Raw Materials

The June average cash nickel price is likely to be approximately 3 percent below the May figure. Indonesian nickel ore smelters announced production cuts, due to low selling prices. Reduced availability is expected to provide upward pressure to nickel selling values, in the short term. Nevertheless, monthly average prices are forecast to remain below US\$10,000 per tonne for the remainder of 2017.

Chinese chromium prices declined, in June. This, coupled with low priced offers from Indian producers, put downward pressure on European spot prices. Ferrochrome producers, in several countries, cut production. This helped to lift Chinese spot values towards the end of June. The third quarter chromium contract price was settled at US\$1.10 per lb. We anticipate no further reductions in contract prices, this year. Spot molybdenum values continued to soften, in June. Low demand pushed EU selling values down to levels last recorded at the beginning of 2017. Further reductions are likely in the short term. However, supply tightness may limit the size of any price decreases.

Stainless Steel - North America

MEPS - North American average coil rolled coil transaction values for grades 304 and 316, decreased by more than 4 percent, in June. Austenitic alloy surcharges declined, this month, due to reductions in nickel and molybdenum costs.

Effective prices are expected to fall substantially, in July. These decreases will be driven by significant reductions in alloy surcharges. Values are likely to stabilise during the summer months. Selling figures are forecast to soften, in the final quarter of 2017. However, protectionist measures, following the Section 232 investigation, could result in higher domestic steel prices than we are currently forecasting.

Market & Industry Scene

Capacity/Investment

Slovenia's SIJ Acroni, a producer of stainless quarto plate, has started up a new 95-tonne argon oxygen decarburization (AOD) converter at its Jesenice facility. The investment raises annual production capacity by more than 20 percent. An automated dedusting system was also installed. The modernisation cost €30 million and was undertaken during the past two years. The SIJ Group's metallurgy division, which includes the Acroni and Metal Ravne plants, recorded production of cast steel at 448,497 tonnes in 2016 – an increase of 1.4 percent, compared with the previous twelve-month period.

Stainless steel bar producer, Walsin Lihwa, is installing a new peeling machine at its plant in Yenshui, Taiwan. It can process bright bar up to 160 millimetres in diameter – double its current capability. Commissioning is set for the first quarter of 2018. Walsin Lihwa has a total annual production capacity

of 700,000 tonnes of stainless products, of which, almost 25,000 tonnes are peeled bar.

South Korea's SeAH Changwon Integrated Special Steel (SeAH CSS) has commissioned a new tube extrusion press. It has a capacity of 35,000 tonnes per year of tubes, with a diameter of between 2 and 10 inches. Construction started in July 2015. SeAH CSS produces up to 1.2 million tonnes of stainless, special and carbon grade steels each year.

Raw Material Conversion Margin Grade 304 Cold Rolled Coil

Country		Last Month	This Month
USA	US\$/metric ton	958	1025
Japan	'000 Yen/metric ton	142.6	142.1
Germany	€/metric ton	1015	1083

Definition - The conversion margin is the difference between current transaction price and the intrinsic value of the raw materials.

The July issue of the MEPS Stainless Steel Review will be dispatched on 28 July, 2017.

Price & Product Definitions

All prices in this publication relate to those to be paid by consumers and stockholders for prime material, ex-mill. Prices are for regular business between customers and their local steel mills, negotiated during the current month for delivery in the future. Delivery charges and local taxes are excluded. Contract deals arranged in the domestic market or special negotiations for quantities of imported material are also excluded. A market or basis price can be defined as our analysis of the value negotiated for the specified products including extras for grade and form of supply. The transaction price is the total amount to be paid including alloy surcharges or alloy adjustment factor (if applicable). All price and market information is researched by MEPS staff and our local correspondents. High and low values are provided to reflect the range of prices between major and minor customers. Price tables relate to deliveries in different time periods. It is important these are read in conjunction with the text in the newsletter.

Please note the reference for steel prices differs, slightly, in the various regions of the world:

Japan - In this publication, market price relates to spot deals negotiated between the mills and consumers or first tier service centres.

South Korea - The low price relates to deals between the mills and large steel consumers. The high price refers to ex-stock mill sales through selected outlets.

World prices are an arithmetic average of the values identified in three regions (EU, Asia and North America). EU prices are an arithmetic average of the values identified in Germany, France, Italy, UK and Spain. North America prices are derived from the values identified in USA. Asia prices are an arithmetic average of the values identified in Japan, Taiwan, South Korea and China. All prices are collected in national currencies and converted into US dollars to provide a basis for comparison.

Hot Rolled Wide Coil - Grades 304 and 316 in standard widths and finish. Thickness 3-12mm except USA 0.125-0.5 inches.

Hot Rolled Quarto Plate - Grades 304 and 316 in standard widths, length and finish. Thickness 13mm and above except USA 0.5 inches and above.

Cold Rolled Wide Coils - Grades 304, 316, 409 and 430 in standard widths. Thickness 2mm except USA 0.10 inches. Grade 430 - BA finish except USA and China 2B finish. Grade 304 and 316 - 2B finish all countries.

Bright Drawn Bar - Grades 304 and 316. Diameter 25mm except USA 1 inch.

Peeled/Rough Turned Bar - Grades 304 and 316. Diameter 50-100mm except USA 2-4 inches. South Korean figures are for precision bar.

The data contained in this newsletter has been obtained from respondents who we consider provide accurate intelligence on the steel market. We make our best endeavours to be assured that the information is correct and that our analysis is reliable. MEPS (International) Ltd cannot be made liable for any loss resulting from the use of our published data, however it may arise.

MEPS Publications

European Steel Review (monthly)

This is our flagship publication. The first report was produced in 1984. Each monthly issue incorporates high and low market prices for eleven steel product forms in the EU - Germany, France, Italy, Spain, UK and Belgium. Data for flat and long products is supplied in each edition. Details of EU Average Steel Transaction Prices are incorporated together with regular forecasts.

International Steel Review (monthly)

Each edition carries domestic steel pricing data in thirteen countries across the globe, including - United States, Canada, China, Japan, South Korea, Taiwan, Poland, Czech Republic and the main five EU member states - covering 70 percent of world consumption. Details of World and Regional Average Steel Prices are incorporated together with regular forecasts.

World Steel Outlook to 2021 (Quarterly)

One-year and five-year forecasts for crude steel, pig iron and DRI production for all main producing countries/regions. Also included is detailed statistics for finished steel production for the ten main rolled steel products (Hot Rolled Coil, Hot Rolled Plate, Cold Rolled Coil, Metal Coated Sheet, Electrical Sheet, Tinplate, Wire Rod, Sections and Beams, Rebar and Merchant Bar) in the EU, China, India, Japan, South Korea, Taiwan, Brazil and the US. From trade data we are also able to prepare estimates for apparent consumption.

The report briefly comprises of:

- Steel Market Overview
- Economic Overview (Including GDP forecasts)
- Iron and Steel Production (Short and long-term forecasts for crude steel, pig iron and DRI)
- Finished Steel Production, Trade and Consumption
- Regional Steel Price (Charts)
- Historical Data Tables
